

Firmware Upgrade

Here you can view the current version of the firmware of your TripMate

The screenshot shows a mobile application interface titled "Firmware Upgrade". At the top, there is a blue header bar with a "Back" button on the left and a home icon on the right. Below the header, the "Current firmware version" is displayed as "2.000.028" in a grey box. Underneath, the "New firmware version" field is empty, followed by a blue "Browse" button. At the bottom, a warning box with a red exclamation mark icon contains the text: "Upgrade in progress, do not cut off the power, otherwise the upgrade will fail and the device cannot start properly!"

And you can upgrade the firmware

The First Way:

To upgrade the firmware, please follow the steps below:

1. Download the firmware from the Hootoo website:
<https://www.hootoo.com/downloads-81-88001-010.html#downloads-2000>
2. Unzip it and put it in your devices (Android device or Mac, Windows, but not iOS devices!)
3. Insert a USB storage device into your TripMate (e.g an external hard drive or a USB flash drive)
4. Connect to TripMate via wireless
5. Open a browser and enter 10.10.10.254
6. **Settings** → **System Settings** → **Firmware Upgrade** → **Browse**, Browse and select the exact file in your devices

This screenshot is identical in layout to the one above, showing the "Firmware Upgrade" interface. The "Current firmware version" is now "2.000.022". The "New firmware version" field remains empty, and the "Browse" button is still present. The warning message at the bottom is the same: "Upgrade in progress, do not cut off the power, otherwise the upgrade will fail and the device cannot start properly!"

7. Click **Firmware Upgrade**,

You will be prompted to wait 5 minutes while the system updates. After the system has updated, you will have successfully updated the firmware.

The second way:

1. Please put the unzip-firmware in the root of your USB drive but not in any folders. (please note: our product just only support fat 16/fat32/ntfs/exfat format)
2. connect your devices (android devices/ios devices) to tripmate wireless
3. plug the USB drive on TripMate
4. **open the latest app (TripMate Plus)**
5. app would inform you it is upgrading the firmware automatically."
