Features

- 10× optical zoom.
- Adopts a newly developed DSP for improved picture quality when using the digital zoom or the slow shutter.
- VISCA is a communications protocol, which enables the camera to be controlled remotely by commands from a host computer/controller.
- Six memory locations are provided to temporarily save and recall up to six sets of camera settings.
- The super HAD CCD features 380,000 effective picture elements and shooting with enhanced sensitivity. The minimum illumination required is 2 lux (1/60 s (NTSC), 1/50 s (PAL)).

With consideration given to environmental protection, this module is designed to operate with low power consumption and incorporates lead-free and halogenfree circuit boards.

Locations of Controls

Main Unit

- 1 Lens
- 2 CN901 connector
- 3 WIDE button
- 4 TELE button

- 5 CN701 connector
- 6 CN751 connector
- 7 Tripod screw holes

When a tripod is used, please use 5.5 mm ($^{7}/_{32}$ in.) screws to attach it to the camera. Also, please be sure to attach the tripod securely.

Basic Functions

Overview of Functions

VISCA commands are the basis of camera control.

Timing Chart

As VISCA Command processing can only be carried out one time in a Vertical cycle, it takes the maximum 1V cycle time for an ACK/Completion to be returned. If the Command ACK/Completion communication time can be cut shorter than the1V cycle time, then every 1V cycle can receive a Command.

General

• Power On/Off

Powers the camera on and off. When the power is off, the camera is able to accept only the lowest level of VISCA Commands; the display and other features are turned off.

• I/F clear

Clears the Command buffer of the FCB-IX10A/ IX10AP. Clearing the buffer can also be carried out from the control application software when the power is on.

Address set

VISCA is a protocol, which normally can support a daisy chain of up to seven attached devices. Whenever a camera is connected for the first time, be sure to use the address set to confirm the address.

• ID Write

Sets the camera ID.

• Mute

Blanks the screen and sends out a synchronizing signal.

Lens Initialization

Initializes the zoom and focus of the lens. Even when power is already on, it initializes the zoom and the focus.

Comp Scan

A pixel blemish-masking feature is used to reevaluate overall CCD pixel blemishes and mask severely flawed pixels automatically upon receiving the COMP SCAN command. This feature helps to mask the flaws found in CCD imagers, even after the camera has been powered on for some time.

Zoom

The FCB-IX10A/IX10AP employs an $10\times$ optical zoom lens combined with a digital zoom function allowing you to zoom up to $40\times$.

Lens specifications: Optical 10×, f = 4.2 to 42 mm (F1.8 to F2.9)

The horizontal angle of view is approximately 46 degrees (wide end) to 4.6 degrees (tele end). Digital Zoom enlarges the center of the subject by expanding each image in both the vertical and horizontal directions. When $40 \times \text{zoom}$ is used, the number of effective picture elements in each direction reduces to 1 /4 and the overall resolution deteriorates.

You can activate the zoom in the following two ways:

• By pressing the TELE or WIDE button on the camera itself.

• Using a VISCA Command

Using Standard Mode Using Variable Mode There are eight levels of zoom speed. Direct Mode Setting the zoom position enables quick movement to the designated position. Digital Zoom ON/OFF

In these standard and variable Speed Modes, it is necessary to send a "Stop Command" to stop the zoom operation.

• The Zoom Mode supports a Combined Mode and a Separate Mode.

Combined Mode

This is the previously existing zoom method. After the optical zoom has reached its maximum level, the camera switches to Digital Zoom Mode. **Separate Mode**

In this mode, Optical Zoom and Digital Zoom can be operated separately. You can use digital zoom magnification at any time from within any level of optical magnification.

Focus

Focus has the following modes, all of which can be set using VISCA Commands.

• Auto Focus Mode

The minimum focus distance is 10 mm at the optical wide end and 1060 mm at the optical tele end, and is independent of the digital zoom.

The AutoFocus (AF) function automatically adjusts the focus position to maximize the high frequency content of the picture in a center measurement area, taking into consideration the high luminance and strong contrast components.

- Normal AF Mode

This is the normal mode for AF operations.

- Interval AF Mode

The mode used for AF movements carried out at defined intervals. The time intervals for AF movements and for the timing of the stops can be set in one-second increments using the Set Time Command. The initial value for both is set to five seconds.

- Zoom Trigger Mode

When the zoom is changed with the TELE button, WIDE button, VISCA Zoom commands or key switches, the pre-set value (initially set at 5 seconds) becomes that for AF Mode. Then, it returns to Manual Focus mode.

AF sensitivity can be set to either HIGH or LOW. - HIGH

Reaches the highest focus speed quickly. Use this when shooting a subject that moves frequently. Usually, this is the most appropriate mode.

Improves the stability of the focus. When the lighting level is low, the AF function does not take effect, even though the brightness varies, contributing to a stable image.

When used for 24 hours continuously, initialization of lens system once a day is recommended because this will make the life of lens longer. The Initialize Lens Command takes a little less than 3 seconds to initialize the focus and zoom.

Manual Focus Mode

Manual Focus has both a Standard Speed Mode and a Variable Speed Mode. Standard Speed Mode focuses at a fixed rate of speed. Variable Speed Mode has eight speed levels that can be set using a VISCA Command.

One Push Trigger Mode

When a Trigger Command is received, the lens moves to adjust the focus for the subject. The focus lens then holds the same position until the next Trigger Command is input.

• Infinity Mode

The lens is forcibly moved to a position suitable for an unlimited distance.

• Near Limit Mode

Can be set in a range from $1000 (\infty)$ to C000 (10 mm).

White Balance

White Balance has the following modes, all of which can be set using VISCA Commands.

• Auto White Balance

This mode computes the white balance value output using color information from the entire screen. It outputs the proper value using the color temperature radiating from a black subject based on a range of values from 3000 to 7500K.

This mode is the default setting.

• ATW

Auto Tracing White balance (2000 to 10000 K)

• Indoor

3200 K Base Mode

• Outdoor

5800 K Base Mode

• One Push WB

The One Push White Balance mode is a fixed white balance mode that may be automatically readjusted only at the request of the user (One Push Trigger), assuming that a white subject, in correct lighting condition, and occupying more than 1/2 of the image, is submitted to the camera.

One Push White Balance data is lost when the power is turned off. If the power is turned off, reset the One Push White Balance.

• Manual WB

Manual control of R and B gain, 256 steps each

Automatic Exposure Mode

The variety of AE functions, which allow video signal to output the optimum image for subjects from low light conditions to bright light conditions, are available.

• Full Auto

Auto Iris and Gain, Fixed Shutter Speed (NTSC: $^{1}/_{60}$ s, PAL: $^{1}/_{50}$ s)

• Shutter Priority¹⁾

Variable Shutter Speed, Auto Iris and Gain (1/1 to 1/10,000 s, 22 steps, std. shutter: 16 steps, slow shutter: 6 steps)

• Iris Priority

Variable Iris (F1.8 to Close, 18 steps), Auto Gain and Shutter speed

Manual

Variable Shutter, Iris and Gain

Bright

Variable Iris and Gain (Close to F1.8, 17 steps at 0 dB: F1.8, 15 steps from 0 to 28 dB)

 \rightarrow ¹/₁₀₀ s for NTSC models used in countries with a 50 Hz power supply frequency.

AE – Shutter Priority

The shutter speed can be set freely by the user to a total of 22 steps – 16 high speeds and 6 low speeds. When the slow shutter is set, the speed can be $^{1}/_{30}$, $^{1}/_{15}$, $^{1}/_{8}$, or $^{1}/_{4}$ s. The picture output is read at a normal rate from the memory. The memory is updated at a low rate from the CCD. AF capability is low. In high speed mode, the shutter speed can be set up to $^{1}/_{10,000}$ s. The iris and gain are set automatically, according to the brightness of the subject.

| - | - | - |
|------|-------|-------|
| Data | NTSC | PAL |
| 15 | 10000 | 10000 |
| 14 | 6000 | 6000 |

| 02 | 4 | 3 |
| 01* | 2 | 2 |
| 00* | 1 | 1 |
| | | |

* For AE-Manual only.

AE – Iris Priority

The iris can be set freely by the user to 18 steps between F1.8 and Close.

The gain and shutter speed are set automatically according to the brightness of the subject.

| Data | Setting value | Data | Setting value |
|------|---------------|------|---------------|
| 11 | F1.8 | 08 | F8 |
| 10 | F2.0 | 07 | F9.6 |
| 0F | F2.4 | 06 | F11 |
| 0E | F2.8 | 05 | F14 |
| 0D | F3.4 | 04 | F16 |
| 0C | F4.0 | 03 | F19 |
| 0B | F4.8 | 02 | F22 |
| 0A | F5.6 | 01 | F28 |
| 09 | F6.8 | 00 | CLOSE |

 \rightarrow ¹/₁₂₀ s for PAL models used in countries with a 60 Hz power supply frequency.

¹⁾ Flicker can be eliminated by setting shutter to:

AE – Manual

The shutter speed (22 steps), iris (18 steps) and gain (16 steps) can be set freely by the user.

AE – Bright

The bright control function adjusts both the gain and iris using an internal algorithm according to a brightness level freely set by the user. Exposure is controlled by gain when dark, and by iris when bright. As both gain and iris are fixed, this mode is used when exposing at a fixed camera sensitivity. When switching from Full Auto or Shutter Priority Mode to Bright Mode, the current status will be retained for a short period of time.

Only when the AE mode is set to "Full Auto" or "Shutter Priority," the user can switch it to "Bright."

| Data | Iris | Gain | Data | Iris | Gain |
|------|------|-------|------|-------|------|
| 1F | F1.8 | 28 dB | 0F | F2.4 | 0 dB |
| 1E | F1.8 | 26 dB | 0E | F2.8 | 0 dB |
| 1D | F1.8 | 24 dB | 0D | F3.4 | 0 dB |
| 1C | F1.8 | 22 dB | 0C | F4.0 | 0 dB |
| 1B | F1.8 | 20 dB | 0B | F4.8 | 0 dB |
| 1A | F1.8 | 18 dB | 0A | F5.6 | 0 dB |
| 19 | F1.8 | 16 dB | 09 | F6.8 | 0 dB |
| 18 | F1.8 | 14 dB | 08 | F8.0 | 0 dB |
| 17 | F1.8 | 12 dB | 07 | F9.6 | 0 dB |
| 16 | F1.8 | 10 dB | 06 | F11 | 0 dB |
| 15 | F1.8 | 8 dB | 05 | F14 | 0 dB |
| 14 | F1.8 | 6 dB | 04 | F16 | 0 dB |
| 13 | F1.8 | 4 dB | 03 | F19 | 0 dB |
| 12 | F1.8 | 2 dB | 02 | F22 | 0 dB |
| 11 | F1.8 | 0 dB | 01 | F28 | 0 dB |
| 10 | F2.0 | 0 dB | 00 | CLOSE | 0 dB |

When switching from the Shutter Priority mode to the Bright mode, the shutter speed set in the Shutter Priority mode is maintained.

Spot Exposure Mode

In Full Auto AE, the level for the entire screen is computed and the optimum Auto Iris and Gain levels are determined. In Spot AE, a particular section of the subject can be designated, and then that portion of the image can be weighted and a value computed so that Iris and Gain can be optimized to obtain an image. For example, in an image with a lot of movement and with varying levels of brightness, portions without much change can be designated as such a "spot," and changes to the screen can be minimized in that area. As shown in the diagram below, a range of 16 blocks vertically and 16 blocks horizontally can be designated.

In the case where the center is designated (shown in black), the level is computed along with a weighted value for the surrounding block (shaded), including the specified portions; and then the Gain and Iris are set. The value of the designated portions and the surrounding areas should be calculated as 90% and the rest should be set to 10%.

Exposure Compensation

Exposure compensation is a function which offsets the internal reference brightness level used in the AE mode by steps of 1.5 dB.

| Data | Step | Setting value |
|------|------|---------------|
| 0E | 7 | 10.5 dB |
| 0D | 6 | 9 dB |
| 0C | 5 | 7.5 dB |
| 0B | 4 | 6 dB |
| 0A | 3 | 4.5 dB |
| 09 | 2 | 3 dB |
| 08 | 1 | 1.5 dB |
| 07 | 0 | 0 dB |
| 06 | -1 | -1.5 dB |
| 05 | -2 | -3 dB |
| 04 | -3 | -4.5 dB |
| 03 | -4 | -6 dB |
| 02 | -5 | -7.5 dB |
| 01 | -6 | -9 dB |
| 00 | _7 | -10.5 dB |

Aperture Control

Aperture control is a function which adjusts the enhancement of the edges of objects in the picture. There are 16 levels of adjustment, starting from "no enhancement." When shooting text, this control may help by making the text sharper.

Back Light Compensation

When the background of the subject is too bright, or when the subject is too dark due to shooting in the AE mode, back light compensation will make the subject appear clearer.

Slow Shutter – Auto/Manual

When the Slow Shutter is set to "Auto," this ensures that the slow shutter is engaged automatically when the brightness drops. This occurs only when the AE mode is set to "Full Auto."

"Slow Shutter Manual" is the factory setting.

Camera ID

The ID can be set up to 65,536 (0000 to FFFF). As this will be memorized in the nonvolatile memory inside the camera, data will be saved regardless of whether it has been backed up.

Effect

- It consists of the following functions.
- Neg. Art: Negative/Positive Reversal
- Black White: Monochrome Image

Others

Mirror Image

The video output from the camera can be reversed left and right using this function.

Freeze

This function captures an image in the field memory of the camera so that this image can be output continuously.

Because communication inside the camera is based on V cycle, the captured image is always the one 3V to 4Vs after the sending of a Command. Thus, you can not specify a time period after sending EVEN, ODD or a Command.

Memory (Position Preset)

Using the position preset function, 6 sets of camera shooting conditions can be stored and recalled. This function allows you to achieve the desired status instantly even without adjusting the following items each time:

- Zoom Position
- Digital Zoom On/Off
- Focus Auto/Manual
- Focus Position
- AE Mode
- Shutter control parameters
- Bright Control
- Iris control parameters
- Gain control parameters
- Exposure Compensation On/Off
- Exposure Level
- Backlight Compensation On/Off
- Slow Shutter Auto/Manual
- White Balance Mode
- R/B Gain
- Aperture

Custom Preset

As with the position preset function, the camera shooting conditions can be stored and recalled. The settings are recalled when the power is turned on. For setting items, refer to the "Initial Settings, Custom Preset and Backup" section on page 15.

Title Display

The camera can be given a title containing up to 20 characters such as "ENTRANCE" or "LOBBY". The position of the first character (horizontal, vertical) of the title, blinking state, and color can also be changed.

| Vposition | 00 to 0A | | | |
|-----------|----------|-----------|--|--|
| Hposition | 00 t | o 17 | | |
| Blink | 00: Does | not blink | | |
| Blink | 01: Blin | | | |

| | | | | | | | |

Date and Time Display

The date and time (accuracy: ± 30 s/month) can be displayed on the video monitor using a Display command.

Eclipse

When designing the housing, refer to the dimensional allowance as shown in the figure below.

Vibration Specifications

Test Method (Random vibration)

- Fix the camera at the four fixation points of the base using M2 screws.
- Perform the random vibration test under the following conditions in the X, Y and Z directions for 20 minutes in each direction.
- The camera vibration specification is to have no malfunction after this test.

| Power spectrum density | $ \begin{array}{cccccccccccccccccccccccccccccccccccc$ |
|-------------------------|---|
| Effective overall value | 14.3 m/s ² {1.46 G} |
| Test time | 20 minutes |

Spectral Sensitivity Characteristics

| Others | APERTURE UP | Increase aperture (Aperture UP) | Request UP. | Aperture bar displayed for 3 s. |
| | AUTO SLOW SHUTTER | Switch Auto Slow Shutter on/off. | Switch on/off. | "ASS" (character display) |
| | APERTURE DOWN | Decrease aperture (Aperture DOWN) | Request DOWN. | Aperture bar displayed for 3 s. |
| | AF SENSITIVITY | Switch AF sensitivity between Normal and Low. | Switch between Normal and Low. | "SENS L" (character display) |
| | BRIGHT UP | Raise brightness setting (Bright UP) (When not in Bright mode, switching to Bright mode is made automatically depending on the conditions.) | Request UP./Pressing repeatedly allowed. | Bright bar display |
| | BRIGHT DOWN | Lower brightness setting (Bright DOWN) (When not in Bright mode, switching to Bright mode is made automatically depending on the conditions.) | Request DOWN./Pressing repeatedly allowed. | Bright bar display |

Initial Settings, Custom Preset and Backup

Initial settings for the various functions of the FCB-IX10A/IX10AP are indicated in the "Initial settings" column.

The "Custom preset" column indicates whether the custom preset function can be used to store the settings. The function enables the stored settings to be recalled automatically when the camera is turned on. The "Standby backup" column indicates whether the data is preserved even when the camera is powered OFF. A circle "O" in this column signifies that the data is preserved. A cross "×" signifies that the data IS NOT preserved.

| Mode/Position | Initial settings | Custom preset | Standby backup |
|------------------------------|-----------------------------------|---------------|-------------------|

Command List

VISCA¹/RS-232C Commands

This Manual outlines an RS-232C control protocol and command list for certain Sony cameras from which control software can be developed. THIS CONTROL PROTOCOL AND COMMAND LIST IS PROVIDED BY SONY ON AN "AS-IS BASIS" WITHOUT WARRANTY OF ANY KIND. SONY DOES NOT WARRANT ANY PARTICULAR **RESULT FROM THE USE OF THIS CONTROL** PROTOCOL AND COMMAND LIST AND DISCLAIMS AND EXCLUDES ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THAT CONTROL PROTOCOL AND COMMAND LIST, INCLUDING, BUT NOT LIMITED TO, ANY OR ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IN FACT, SONY SPECIFICALLY ACKNOWLEDGES THAT SOFTWARE DEVELOPED BASED ON THIS CONTROL PROTOCOL AND COMMAND LIST MAY CAUSE MALFUNCTION OR DAMAGE TO HARDWARE AND SOFTWARE USED WITH IT (INCLUDING SONY HARDWARE AND SOFTWARE) AND SPECIFICALLY DISCLAIMS ANY LIABILITY FOR ANY SUCH MALFUNCTION OR DAMAGE. THIS CONTROL PROTOCOL AND COMMAND LIST SHOULD BE USED WITH CAUTION.

Overview of VISCA

In VISCA the device outputting commands, for example, a computer, is called the controller. The device receiving the commands, an FCB-IX10A/ IX10AP camera is called the peripheral device. In VISCA, up to seven peripheral devices like the FCB-IX10A/IX10AP camera can be connected to one controller using communication conforming to the RS-232C standard. The parameters of RS-232C are as follows:

- Communication speed: 9.6 kbps/19.2 kbps/ 38.4 kbps
- Data bits : 8
- Start bit : 1
- Stop bit : 1/2
- Non parity

Peripheral devices are connected in a daisy chain. As shown in the following figure, the actual internal connection is a one-direction ring, so that messages return to the controller via the peripheral devices. The devices on the network are assigned addresses. The address of the controller is fixed at 0. The addresses of the peripheral devices are 1, 2, 3 ... in order, starting from the one nearest the conttoller. The address of the peripheral device is set by sending address commands during the initialization of the network.

1)VISCA is a protocol which controls consumer camcorders developed by Sony. "VISCA" is a trademark of Sony Corporation.

VISCA network structure

Notes

- Connect the serial output from the PC to the serial input of camera 1, then connect the serial output of camera 1 to the serial input of camera 2, the serial output of camera 2 to the serial input of camera 3, and the serial output of camera 3 to the serial input of the PC. (Up to seven cameras may be connected.)
- Power on all the units connected in series.
- Mixed existence of RS-232C and TTL signal levels is not allowed.

VISCA Communication Specifications

VISCA Packet Structure

The basic unit of VISCA communication is called a packet. The first byte of the packet is called the header and comprises the sender's and receiver's addresses. For example, the header of the packet sent to the FCB-IX10A/IX10AP camera assigned address 1 from the controller (address 0) is hexadecimal 81H. The packet sent to the camera assigned address 2 is 82H. In the command list, as the header is 8X, input the address of the camera at X. The header of the reply packet from

the camera assigned address 1 is 90H. The packet from the camera assigned address 2 is A0H. Some of the commands for setting cameras can be sent to all devices at one time (broadcast). In the case of broadcast, the header should be hexadecimal 88H. When the terminator is FFH, it signifies the end of the packet.

Command and Inquiry

Command

Sends operational commands to the FCB-IX10A/ IX10AP camera.

• Inquiry

Used for inquiring about the current state of the FCB-IX10A/IX10AP camera.

| | Command Packet | Note |
|-----------------------|------------------------|----------------------------------|
| Inquiry | 8X QQ RR FF | $QQ^{1} = Command/Inquiry,$ |
| | | RR ²⁾ = category code |
| ¹⁾ QQ = 01 | (Command), 09 (Inquiry | () |

²⁾ RR = 00 (Interface), 04 (camera 1), 06 (Pan/Tilter), 07 (camera 2)

X = 1 to 7: FCB-IX10A/IX10AP address

Responses for Commands and Inquiries

• ACK message

Returned by the FCB-IX10A/IX10AP camera when it receives a command. No ACK message is returned for inquiries.

• Completion message

Returned by the FCB-IX10A/IX10AP camera when execution of commands or inquiries is completed. In the case of inquiry commands, it will contain reply data for the inquiry after the 3rd byte of the packet. If the ACK message is omitted, the socket number will contain 0.

| | Reply Packet | Note |
|--------------------------|-------------------|-------------------|
| Ack | X0 4Y FF | Y = socket number |
| Completion (commands) | X0 5Y FF | Y = socket number |
| Completion (Inquiries) | X0 5Y FF | Y = socket number |
| X = 9 to F: FCB-IX10A/IX | (10AP address + 8 | } |

• Error message

When a command or inquiry command could not be executed or failed, an error message is returned instead of the completion message.

| Error Packet | Description |
|------------------|--------------------------------------|
| X0 6Y 01 FF | Message length error (>14 bytes) |
| X0 6Y 02 FF | Syntax Error |
| X0 6Y 03 FF | Command buffer full |
| X0 6Y 04 FF | Command cancelled |
| X0 6Y 05 FF | No socket (to be cancelled) |
| X0 6Y 41 FF | Command not executable |
| X = 9 to F: FCB- | IX10A/IX10AP address + 8, Y = socket |
| number | |

Socket Number

When command messages are sent to the FCB-IX10A/ IX10AP camara, it is normal to send the next command message after waiting for the completion message or error message to return. However to deal with advanced uses, the camera has two buffers (memories) for commands, so that up to two commands including the commands currently being executed can be received. When the camera receives commands, it notifies the sender which command buffer was used using the socket number of the ACK message. As the completion message or error message also has a socket number, it indicates which command has ended. Even when two command buffers are being used at any one time, a camera management command and some inquiry messages can be executed. The ACK message is not returned for these commands and inquiries, and only the completion message of socket number 0 is returned.

Command Execution Cancel

To cancel a command which has already been sent, send the IF_Clear command as the next command. To cancel one of any two commands which have been sent, use the cancel message.

| | Cancel Packet | Note |
|-------------|------------------|----------------------------|
| Cancel | 8X 2Y FF | Y = socket number |
| X = 1 to 7: | FCB-IX10A/IX10AP | address, Y = socket number |

An error message will be returned for this command, but this is not a mistake. This message indicates that the command has been canceled.

VISCA Device Setting Command

Before starting control of the FCB-IX10A/IX10AP, be sure to send the Address command and the IF_Clear command using the broadcast function.

For VISCA Network Administration

Address

Sets an address of a peripheral device. Use when initializing the network and when receiving the network change message indicated below.

Network Change

Sent from the peripheral device to the controller when a device is removed from or added to the network. The address must be re-set when this message is received.

| | Packet | Note |
|--------------------|-----------------|---------------------|
| Address | 88 30 01 FF | Always broadcasted. |
| Network Change | X0 38 FF | |
| X = 9 to F: FCB-IX | 10A/IX10AP addi | ress + 8 |

VISCA Interface Command

• IF_Clear

Clears the command buffers in the FCB-IX10A/ IX10AP and cancels the command currently being executed.

Command Packet Reply Packet Note

| IF_Clear | 8X 01 00 01FF | X0 50 FF |
|----------------------|-----------------|--------------------------|
| IF_Clear (broadcast) | 88 01 00 01 FF | 88 01 00 01 FF |
| X = 1 to 7: FCB-IX10 | 0A/IX10AP addre | ss (For inquiry packet) |
| X = 9 to F: FCB-IX10 | A/IX10AP addre | ss +8 (For reply packet) |

VISCA Interface and Inquiry

• IF_DeviceTypeInq

Returns information on the VISCA interface.

| Inquiry IF_DeviceTypeInq | Inquiry Packet 8X 09 00 02 FF | Reply Packet Y0 50 GG GG HH HH JJ JJ KK FF | Description GGGG = Vender ID (0020: Sony) HHHH = Model ID 041C=FCB-IX10A 041D=FCB-IX10AP JJJJ = ROM revision KK = Maximum socket # (02) |
|-----------------------------|----------------------------------|--|--|
| | | | KK = Maximum socket # (02) |

X = 1 to 7: FCB-IX10A/IX10AP address (For inquiry packet) X = 9 to F: FCB-IX10A/IX10AP address +8 (For reply packet)

VISCA Command/ACK Protocol

| Command | Command Message | Reply Message | Comments |
|----------------------|--------------------------------|---|--|
| General Command | 81 01 04 38 02 FF (Example) | 90 41 FF (ACK)+90 51 FF (Completion) 90 42 FF 90 52 FF | Returns ACK when a command has been accepted, and Completion when a command has been executed. |
| | 81 01 04 38 FF (Example) | 90 60 02 FF (Syntax Error) | Accepted a command which is not supported or a command lacking parameters. |
| | 81 01 04 38 02 FF (Example) | 90 60 03 FF (Command Buffer Full) | There are two commands currently being executed, and the command could not be accepted. |
| | 81 01 04 08 02 FF (Example) | 90 61 41 FF (Command Not Executable) 90 6 <u>2</u> 41FF | Could not execute the command in the current mode. |
| Inquiry Command | 81 09 04 38 FF (Example) | 90 50 <u>02</u> FF (Completion) | ACK is not returned for the inquiry command. |
| | 81 09 05 38 FF (Example) | 90 60 02 FF (Syntax Error) | Accepted an incompatible command. |
| Address Set | 88 30 <u>01</u> FF | 88 30 <u>02</u> FF | Returned the device address to +1. |
| IF_Clear (Broadcast) | 88 01 00 01 FF | 88 01 00 01 FF | Returned the same command. |
| IF_Clear (For x) | 8x 01 00 01 FF | z0 50 FF (Completion) | ACK is not returned for this command. |
| Command Cancel | 8x 2y FF | z0 6y 04 FF (Command Canceled) | Returned when the command of the socket specified is canceled. Completion for the command canceled is not returned. |
| | | z0 6y 05 FF (No Socket) | Returned when the command of the specified socket has already been completed or when the socket number specified is wrong. |

VISCA Camera-Issued Messages

ACK/Completion Messages

| | Command Messages | Comments |
|------------|---|--|
| ACK | z0 4y FF Returned when the command is accepted. | |
| | (y:Socket No.) | |
| Completion | z0 5y FF | Returned when the command has been executed. |
| | (y:Socket No.) | |

z = Device address + 8

Error Messages

| | Command Messages | Comments |
|------------------------|-------------------------------|--|
| Syntax Error | z0 60 02 FF | Returned when the command format is different or when a command with illegal command parameters is accepted. |
| Command Buffer Full | z0 60 03 FF | Indicates that two sockets are already being used (executing two commands) and the command could not be accepted when received. |
| Command Canceled | z0 6y 04 FF (y:Socket No.) | Returned when a command which is being executed in a socket specified by the cancel command is canceled. The completion message for the command is not returned. |
| No Socket | z0 6y 05 FF (y:Socket No.) | Returned when no command is executed in a socket specified by the cancel command, or when an invalid socket number is specified. |
| Command Not Executable | z0 6y 41 FF (y:Socket No.) | Returned when a command cannot be executed due to current conditions. For example, when commands controlling the focus manually are received during auto focus. |

Network Change Message

| | Command Message | Comments |
|----------------|-----------------|------------------------------------|
| Network Change | z0 38 FF | Issued when power is being routed. |

Precautions

Software

Use of the demonstration software developed by Sony Corporation or use of the software with customer developed application software may damage hardware, the application program or the camera. Sony Corporation is not liable for any damages under these conditions.

Operation

Start the camera control software on your computer after you turn on the camera and the image is displayed.

Operation and storage locations

Do not shoot images that are extremely bright (e.g., light sources, the sun, etc.) for long periods of time. Do not use or store the camera in the following extreme conditions:

- Extremely hot or cold places (operating temperature 0 °C to +50 °C (32 °F to 122 °F))
- Close to generators of powerful electromagnetic radiation such as radio or TV transmitters
- Where it is subject to fluorescent light reflections
- Where it is subject to unstable (flickering, etc.) lighting conditions
- Where it is subject to strong vibration
- Where it is subject to radiation from laser beams

Care of the unit

Remove dust or dirt on the surface of the lens with a blower (commercially available).

Other

Do not apply excessive voltage. (Use only the specified voltage.) Otherwise, you may get an electric shock or a fire may occur.

In case of abnormal operation, contact your authorized Sony dealer or the store where you purchased the product.

Phenomena specific to CCD image sensors

The following phenomena that may appear in images are specific to CCD (Charge Coupled Device) image sensors. They do not indicate malfunctions.

White flecks

Although the CCD image sensors are produced with high-precision technologies, fine white flecks may be generated on the screen in rare cases, caused by cosmic rays, etc.

This is related to the principle of CCD image sensors and is not a malfunction.

The white flecks especially tend to be seen in the following cases:

- when operating at a high environmental temperature
- when you have raised the master gain (sensitivity)
- when operating in Slow-Shutter mode

Vertical smear

When an extremely bright object, such as a strong spotlight or flashlight, is being shot, vertical tails may be produced on the screen, or the image may be distorted.

Aliasing

When fine patterns, stripes, or lines are shot, they may appear jagged or flicker.
