**20 second voice recorder/playback module (A93010/A96010)**[Click here for A96010 Data Sheet](#)[Click here for A93010 Data Sheet](#)

NOTE: This unit will power a 1 watt speaker as is. You do not need to add an external amplifier. However, you can add an external amplifier if you want - as long as you follow the instructions below.

Use this schematic to add a potentiometer when using an additional external amplifier:

When using an external amplifier, you'll need a potentiometer (recommended part# HB165) to decrease the high output signal from the A96010 enough to get a clear sound.

[Click here to see our amplifiers.](#)  
(MD930100)

PLEASE NOTE: This module, part# A96010, could actually be either an A96010 or an A93010 depending on what is in stock at the time. Both are virtually identical and operate the same, but downloadable datasheets are available for each for comparison if necessary. The small size is because the IC is in Chip-on-board form. One button is pushed down to record the message through the on-board electret microphone; A LED turns on during this time. The other button just has to be momentarily pressed to replay the message. A second momentary press during playback will stop the playback. Sampling rate is 4K. All you have to add is the speaker (not included) and 5V DC power (not included). We also have an A96010-kit which in addition to the A96010 also includes a speaker and two cable connectors to connect the unit to a power supply (not included) and the speaker. The

record/play time is determined by the 52K resistor. If you change it to 89K you will get 30 seconds but at a reduced sampling rate. Operating

current 25mA. Standby current 10 uA.  
 Size: 34 x 23 x 11 mm. The module comes supplied as you see it in the photo.

**OPTIONAL ITEMS (Not included):**

- 2 x (BB089) connector cable to connect the voice recorder to a speaker and power source.
- 1 x (PB244) Speaker
- 1 x Battery holder that can hold either 4 x AAA or 4 x AA or 4 x C or 4 x D cells. See our battery holders.

**Voice Recording Module 2 x 20sec sections**

The A96020 voice recording module offers true single chip solid state storage capability and requires no software or micro-controller support. It provides high quality recording and playback with dual 20 second message. Sampling rate is 3.2K. Size: 34 x 23 x 11 mm. All you need to do is add a speaker (not included) and 5V DC Power (not included). Features - Non volatile flash memory technology - No battery back up required - User friendly, easy to operate - Slide switch for record or play back - Separate key to trigger message 1 or 2 - Low power consumption - LED to indicate recording and playback - Built-in condenser mic - Automatic power down - 5-6V Operation.

**OPTIONAL ITEMS (Not included):**

2 x (BB089) connector cable to connect the voice recorder to a speaker and power source.

1 x (PB244) Speaker

1 x Battery holder that can hold either 4 x AAA or 4 x AA or 4 x C or 4 x D cells. See our battery holders.

**10 Sec Recording Module in white case with 3 section slide switch**

20 second voice recorder

Ideal for plush toy, or any kind of talking toys.  
 Message retained when batteries are removed.  
 Built-in microphone and LED recording indicator.  
 Message is retained when batteries are removed.  
 40mm (1.6") Mylar speaker  
 Sound output of more than 85dB at 10cm (3.9") distance (surrounding at 60dB).

**Operation:**

**Record:** Slide the switch to the "REC" position. Press and hold the top of the housing. While the LED recording indicator is on, speak into the built-in microphone about 8-10 cm away with a normal speaking voice. Release the top to end recording. (Recording automatically stops when memory is full.)

**Play:** Slide the switch to the "PLAY" position, and press the top of the housing to play.

3 x AG13 (LR44) batteries (included)  
 Size: 45mm (1.8") (diam.) x 27mm (1.1") (height)  
 Weight: 26 g / 0.9 oz (battery included)

**50 second USB recording module**

This module plugs directly into the USB port of your PC. Then use the free software to record up to 50 seconds of mp3 or wav file to this module. Comes with batteries and speaker ready for use.

**Features**

- Up to 50 seconds of re-recordable voice message (8K sample rate)
- Use USB type-A male connector for direct plug into USB port of PC (USB1.1)
- Easy to transfer software for windows of MP3 or WAV audio file.
- Choice of 8K or 12K sample rate.
- 50 seconds non-volatile recordable IC.
- Operating Voltage 4.5V (3 x AG10 batteries included)
- Operating Current < 50 mA
- Standby Current < 5 uA
- Push switch for playback / stop
- Speaker 40mm metal housing mylar speaker (included)

Dimensions:  
 Main board: Excluding USB connector: 1.7" x 1.13"  
 Including USB connector: 2.25" x 1.13"  
 Battery board: 2.25" x 0.8"

speaker: 1.6" (diameter)

This unit will directly plug into the USB port of your computer. A USB cable is NOT required. However if you do want to plug the unit into a extension USB cable first, you can order our A-male to A-female USB extension cable product number BB147.

**Recording Module 20 second - card type**

20 second card type recording unit. This module can be pasted (self-adhesive backing) into birthday cards, Christmas cards etc. When the card is opened your message will be played. You can record your own custom 20 second message with the built in microphone. The module is pre wired with a speaker and battery. All that is left for you to do is to record a message, past the module in your card and remove the little plastic tubing from the metal strip that protects the battery from running

down when shipped from the factory.

**Product Information**

**Description** 20 second recording card module

**Size** Length : 105mm, Width : 65mm, Height: 6.4mm (4.1"x 2.6" x 0.25")

**Accessories** Battery Insulator, Battery G10 3pcs, Speaker 40mm (1.6")

**Function** Record & Play back

**Operation** Record : Press switch. Play back : Open the card.

**Length of record** 20 seconds

**RoHS compliant:** YES

**40 second Non-volatile multi message recorder kit**

Non-volatile multi message recorder using ISD chips. Just change one resistor for longer duration. Standalone operation using just six onboard buttons. Record via built-in microphone or external line in. Speaker and line out connector. SPI interface. SPI mode allows full control of the chip via the serial interface. This includes random access to any location inside the memory array by specifying the start and end address. SPI mode also allows access to an internal register for configuration of audio paths, inputs, outputs and mixing.

8-24 VDC. PCB Dimensions: 2.75" x 2"

**Please note:** Speaker not included.

Quantity	Price
1 – 9	\$36.82
10 – 99	\$34.20
