

PRO-92 Squelch Controlled Backlight Modification
This modification is untested - proceed at your own risk

Place a 2N7002 mosfet transistor on the PRO-92 logic board in the location shown. It may be necessary to unsolder the metal shield covering the upper part of the board to access the connection points. Follow the directions below for connecting the transistor leads to the circuit. The 2N7002 is available from many sources including Mouser Electronics, DigiKey, MCM Electronics, and Radio Shack (RSU only, not store stock).
